Clarissa—thanks for your prompt response. So that we can resolve our differences on Par. 40 and 56-- through the best mutual understanding of the key data-drivers—can you send me the minute-by-minute measurements on which EPA created the averages for the three tests? Can we regroup on a call at 1:30 your time to discuss the following:

1. What was the range of the baseline-background concentrations of H₂S in the air immediately upwind from BOE— on the days in late June when EPA took its measurements?
2. Why did EPA use inconsistent and widely varying testing duration periods—between 32 and 67 minutes-- for the three average samples that are summarized on p. 16 of the enclosed Report?;

Thanks, Bill
